SOLUTIONS

Capability Statement

This document is commercial in confidence. Capability information, rates and project details contained herein are provided for evaluation purposes only and may not be reproduced or distributed without written consent of Corrosion Coating Solutions

Specialists in structural remediation and asset integrity.

A multi-disciplined industrial services provider delivering corrosion control, inspection and maintenance across Australia.

From coating to complete on-site delivery

Corrosion Coating Solutions (CCS) is an Indigenous owned and operated, multi-disciplined industrial services provider delivering corrosion control, structural remediation, inspection, and maintenance solutions across Australia. As a proudly Supply Nation registered business, CCS combines technical capability with culturally grounded leadership to support safer, stronger, and longer-lasting assets for clients in energy, mining, infrastructure, and industrial sectors.

Our teams specialise in high-performance protective coatings, rope access, surface preparation, and asset integrity services designed to extend asset life and reduce long-term maintenance costs. With a focus on safety, efficiency, and quality, CCS provides reliable, scalable solutions for complex environments—whether during shutdowns, live-site operations, or remote-area projects.

CCS delivers industry expertise backed by Indigenous values, ensuring clients receive both exceptional workmanship and meaningful engagement with Australia's First Nations business sector.

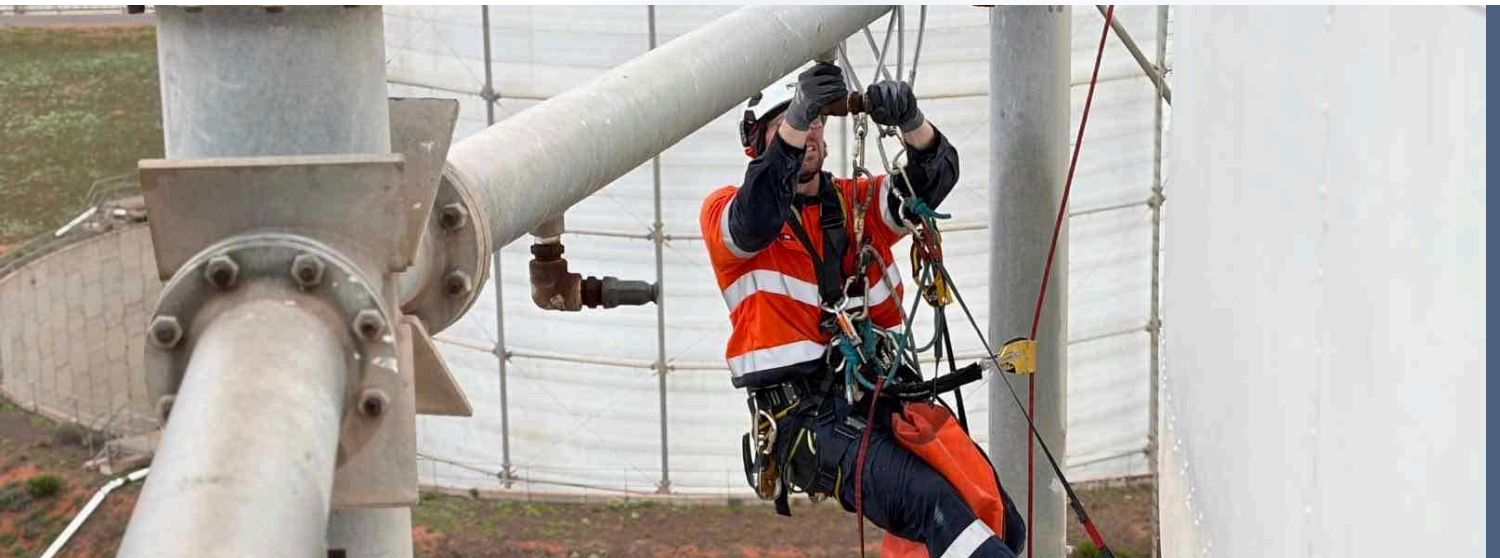

Safety is how we work, not an afterthought

Our crews are trained, competent and multi-disciplined, and we plan every job around safe systems of work. From IRATA rope access to confined space entry, we deliver without compromising the safety of your people or ours.

Rope Access

Engineered Access for Complex Assets

Advanced Access Solutions

Corrosion Coating Solutions uses industrial rope access to safely and efficiently inspect, maintain, remediate and protect steel and concrete assets. Combining advanced access techniques with highly skilled technicians, we deliver complex works where traditional access methods are impractical, disruptive or costly.

Operational Efficiency

Rope access provides safe, direct access to mining, marine, energy, industrial and civil infrastructure while reducing the need for scaffolding, cranes and elevated work platforms. This minimises mobilisation time, operational disruption and project costs.

Rope Access Capabilities

- ✓ Coating & Corrosion Inspections
- ✓ Abrasive Blasting & Painting
- ✓ Passive Fireproofing
- ✓ Non-Destructive Testing (NDT)
- ✓ Dropped Object Surveys
- ✓ Fabrication & Welding Repairs
- ✓ Rigging & Lifting Services
- ✓ Mechanical Fitting

We deliver highly specialised structural remediation and corrosion control works, minimising mobilisation time, project costs, and operational disruption.

Ground-Based

Conventional access via EWPs, scaffolding, cranes and specialised equipment for safe, efficient works at height and on the ground.

Proven access methods for every job

Where rope access is not the right fit, our ground-based crews use elevated work platforms, scaffolding, cranes and specialised equipment to reach the work safely. It is the dependable choice for larger scopes, heavier plant and sustained works where a stable platform matters.

We match the access method to the asset and the task, so your crew works efficiently, safely and with the right gear on site from day one.

What we deliver from the ground up

- ✓ Coating & Corrosion Inspections
- ✓ Abrasive Blasting & Protective Coating Application
- ✓ Passive Fireproofing
- ✓ Dropped Object Surveys
- ✓ Fabrication & Welding Repairs
- ✓ Non-Destructive Testing (NDT)
- ✓ Mechanical Fitting
- ✓ Rigging & Lifting Services

V-Deck Installation

Engineered Suspended Access for Complex Assets

Engineered suspended access solutions delivering safe, efficient working platforms for inspection, structural remediation, corrosion control, protective coatings and maintenance of bridges, conveyors, wharves and other elevated structures.

The V-Deck Advantage

Corrosion Coating Solutions provides engineered V-Deck suspended working platforms that deliver safe, stable and efficient underdeck access for inspection, structural remediation, corrosion control, protective coatings and maintenance of critical infrastructure and industrial assets.

Secure Platform Engineering

Installed by experienced specialist access teams, V-Deck systems create secure working platforms beneath elevated structures, providing safe access for personnel while containing tools, materials and project debris within the work area.

60–75%

Fewer Installation Man-Hours

80–85%

Lighter Platform Weight

Concrete Remediation

Engineered Material Rehabilitation

Structural Reinstatement

Our teams deliver technically sound rehabilitation solutions that restore structural integrity, enhance durability and extend operational life in the most demanding environments.

Integrated Asset Integrity Solutions

Deterioration is often driven by reinforcement corrosion, aggressive chemicals, and service life. We safely execute complex remediation projects using dry gunite, wet-mix shotcrete, pressure grouting, and Cathodic Protection.

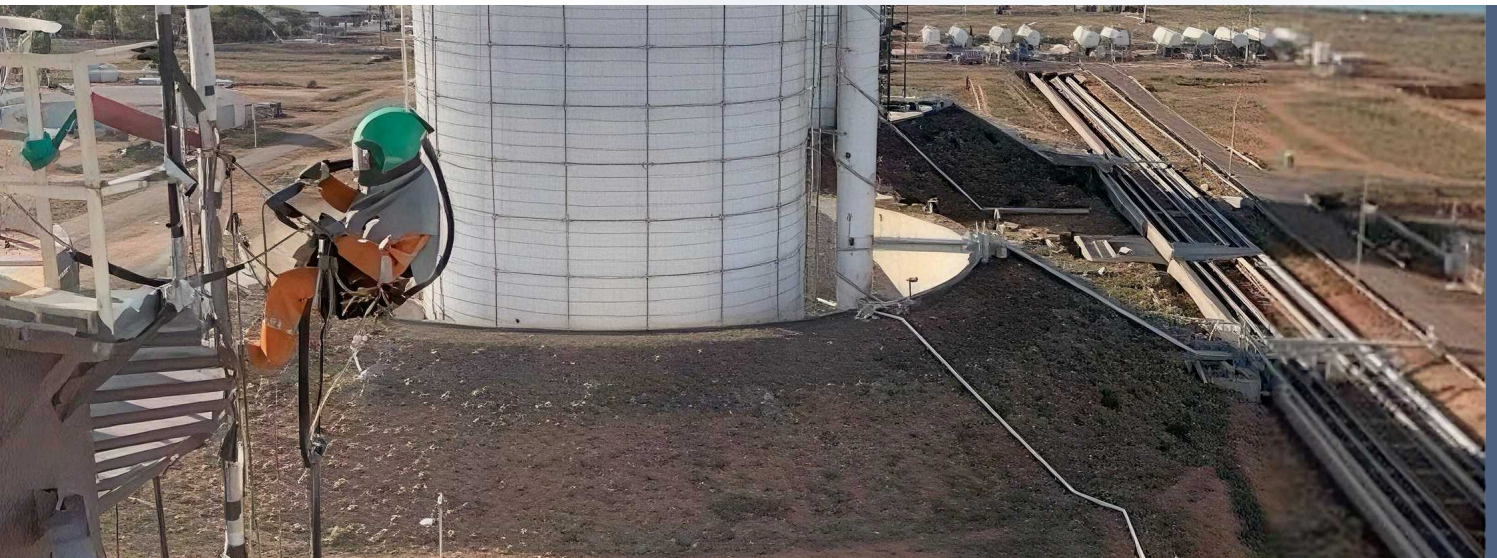

Experts at

- ✓ Concrete Demolition
- ✓ Crack Epoxy Injection
- ✓ Dry Gunite Applications
- ✓ Pressure Grouting
- ✓ Floor Protective Coatings
- ✓ Cathodic Protection

Equipment Supply

The Right Equipment for Surface Preparation and Coating Application

Corrosion Coating Solutions partners with recognised market-leading equipment manufacturers to supply high-performance surface preparation and coating application equipment for steel and concrete assets. From abrasive blasting, hydrodemolition, concrete preparation and dust extraction through to conventional, airless and plural-component coating application systems, we provide proven equipment solutions supported by genuine spares, consumables, technical advice and operator training.

Equipment categories we provide

- ✓ Abrasive Blasting Equipment
- ✓ Hydrodemolition & UHP Water Jetting
- ✓ Laser Surface Cleaning Systems
- ✓ Mechanical Surface Preparation Tools
- ✓ Protective Coating Spray Equipment

Project Integration

Whether supporting a planned shutdown, major infrastructure project or ongoing maintenance program, we work with our clients to specify the right equipment and technology to maximise productivity, safety, and coating performance.

QA / Inspection

Quality Assurance, Inspection & Monitoring
You Can Rely On

Precision inspection and asset integrity solutions. Professional inspection, testing and monitoring equipment to support quality assurance, corrosion control and asset integrity programs across steel and concrete infrastructure.

Workmanship Verification

Accurate inspection and quality assurance are fundamental to achieving compliant, durable and high-performing asset protection systems. We verify compliance at every critical stage.

Data-Driven Decisions

From surface prep monitoring through to long-term concrete condition mapping, our services deliver reliable, repeatable data that supports spec compliance and Australian Standards.

Integrated Solutions for Asset Integrity

Corrosion Coating Solutions provides specialist access, structural remediation, corrosion control, protective coatings, equipment solutions and quality assurance services for Australia's mining, industrial, marine and infrastructure sectors.

01

Specialist Services

Comprehensive structural remediation, concrete repair, corrosion control, protective coatings and asset maintenance delivered using the most appropriate access methodology for every project.

02

Specialist Access

Rope access, conventional access, elevated work platforms, scaffold interface and V-Deck® systems enabling safe and efficient access to complex and operational assets.

03

Equipment & Technical Support

Professional surface preparation, coating application and inspection equipment supported by technical advice, calibration, certification, servicing and operator training.

04

Industries We Support

Delivering engineered solutions across mining, minerals processing, oil and gas, energy, marine, transport, defence, water infrastructure and heavy industrial facilities throughout Australia.

05

Quality, Safety & Compliance

Engineering-led project delivery supported by robust quality assurance systems, skilled personnel, recognised industry standards and practical safety solutions that deliver reliable project outcomes.

Eight reasons asset owners work with us

01

Experienced multi-disciplined workforce

One trained team covering access, coating, inspection and maintenance, so scopes don't fall between contractors.

02

Safe work practices

Every job is planned around safe systems of work, from height and rope access to confined space entry.

03

Cost-effective access solutions

We select the access method that suits the asset, avoiding unnecessary scaffold hire and standing time.

04

Reduced shutdown time

Faster mobilisation and multi-tasked crews shorten outages and get your asset back online sooner.

05

High-quality workmanship

Work delivered and documented to strict coating and remediation quality standards.

06

Flexible project delivery

Scaled to your scope, from a single inspection task to a full shutdown campaign.

07

Commitment to asset integrity

We deliver work that protects and extends the service life of your structural assets.

08

Australia-wide capability

We mobilise to sites across the country, wherever your assets and shutdowns are.
